WINFAB 270HP
WINFAB 370HP
WINFAB 570HP
WINFAB 770HP

DESCRIPTION

WINFAB's complete line of High Performance geotextiles are uniquely designed to produce a superior geotextile fabric which yields exceptional strength combined with increased water flow and filtration properties. WINFAB's high performance geotextiles are designed to provide reinforcement, separation, filtration and confinement for a wide variety of site conditions from moderate to severe. The use of WINFAB's high performance fabrics insure long term performance of transportation systems and consistent load distribution in construction application.

BENEFITS

- High soil confinement for greater load distribution
- Durable and superior damage resistant
- High modulus, for immediate structural support
- Unique weave optimizing both strength and filtration properties

WINFAB WOVEN MONOFILAMENT GEOTEXTILES

DESCRIPTION

WINFAB's offers a wide variety of woven monofilament geotextiles uniquely designed to meet today's requirements for filtration, separation and erosion protection. Manufactured using high strength UV stabilized yarn and designed to meet specific characteristics required for today's engineering challenges. Monofilament fabrics provide exceptional consistency in AOS and water flow properties.

BENEFITS

- Durable polypropylene yarns woven for dimensional stability and consistent pore size
- High permittivity and water flow rates
- Excellent resistance to UV degradation

WINFAB High Tensile

Modulus (HTM) Geotextiles

are uniquely designed to produce a superior geotextile that yields exceptionally high tensile modulus strength properties, combined with increased water flow and filtration properties. WINFAB HTM products provide reinforcement, separation, filtration, drainage and confinement for a wide variety of site conditions from moderate to severe.

HIGH TENSILE MODULUS WOVEN GEOTEXTILE

300HTM

400HTM

600HTM

RUNWAY. ROADWAY. RAILWAY.

WINFAB HTM geotextiles are ideal for soil stabilization and base course reinforcement applications.

Benefits

- High tensile modulus strength properties for immediate structural support
- Exceptional durability and damage resistance
- Unique weave optimizes strength, water flow and filtration properties
- High soil confinement for greater load distribution

Applications

- Soil Stabilization
- Base Course Reinforcement
- Subgrade stabilization for Railway Construction
- Subgrade stabilization for Roadway Construction
- Subgrade stabilization for Runway Construction
- Reinforcing mechanically stabilized earth structures
- Reinforcement for closures over hazardous and non-hazardous ponds
